

Business Performance Analysis Using Power Bi

Submitted by : Muskan H.R

Course: Computer Science(Data Science)

Semester: 4th Semester

Institution: Ballari Institute Of Technology and
Management.

Project Objective:

To Analyze data and identify revenue, trends, top products, high value, Territory Performance.

1. Project Overview

This project focuses on analyzing business sales data to evaluate overall sales performance and uncover actionable insights. Using Power BI, an interactive dashboard was developed to visualize key metrics such as revenue trends, product performance, category contribution, and regional sales distribution.

The goal of this project is to support data-driven decision-making by presenting insights in a clear and visually intuitive manner.

2. Objective

The main objectives of this project are:

To analyze total sales performance over time

To identify top-selling products and high-value categories

To evaluate sales performance across different regions

To provide meaningful business insights and recommendations

3. Tools & Technologies Used

Power BI Desktop

Microsoft Excel (Data Source)

Microsoft Word (Documentation)

4. Dataset Description

The dataset used in this project contains historical sales transaction data.

Key columns include:

Order ID

Order Date

Product Name

Category

Region

Order Status

Quantity Ordered

Sales Amount

5. Key Performance Indicators (KPIs)

The following KPIs were created using DAX measures in Power BI:

Total Sales – Overall revenue generated

Total Orders – Number of unique orders placed

Total Quantity Ordered – Total number of products sold

These KPIs provide a high-level summary of business performance.

6. Dashboard Visualizations

The Power BI dashboard includes the following visual components:

1. KPI Cards

Displays Total Sales, Total Orders, and Total Quantity Ordered

2. Sales Trend Over Time

Line chart showing changes in sales across time periods

3. Quantity Ordered by Order Status

Bar chart representing quantity distribution across order statuses

4. Top 10 Selling Products

Bar chart highlighting products with the highest sales

5. Sales by Category

Column chart showing category-wise sales contribution

6. Sales by Region

Bar chart visualizing regional sales performance

7. Interactive Slicers

Filters for Date, Category, and Region to enable dynamic analysis

7. Key Insights

Sales demonstrate noticeable variation over time, indicating seasonal trends.

A majority of the orders fall under successfully shipped status, reflecting efficient order fulfillment.

A small group of products contributes significantly to total revenue.

Certain categories and regions consistently outperform others in terms of sales.

8. Business Recommendations

Based on the analysis, the following recommendations are proposed:

Increase inventory levels for high-performing products to meet demand.

Focus marketing and promotional efforts on high-revenue regions.

Improve operational processes to reduce cancelled and disputed orders.

Review pricing and promotional strategies for underperforming categories.

9. Conclusion

This Power BI project demonstrates the effective use of data visualization and analytics to understand business sales performance. The dashboard provides valuable insights that can help stakeholders make informed strategic and operational decisions.

This project also highlights proficiency in Power BI, data modeling, and business analysis.
